

Principal Safety Manager Honeywell Aerospace

Honeywell's Aerospace mechanical and electrical aviation products are used today on virtually every aviation platform. We invent and integrate thousands of products and services that deliver safe, efficient, productive and comfortable experiences worldwide. Our solutions include those for flight and runway safety, air traffic management, propulsion, in-flight connectivity tools, precision guidance, wheels and brakes and logistics services used in commercial aviation, business and general aviation, and defense and space segments.

We are currently looking to recruit Principal Safety Manager:

- The team will under your technical supervision deliver the required artifacts necessary for Systems Safety compliance and successful product certification. The team works on System Safety Assessments/Analysis of Flight Control Systems and other Avionics systems of an aircraft;
- Communicate goals/expectations/issues with stakeholders/team;
- Make sure all goals are completed in a satisfactory manner and issues timely communicated;
- Maintain and develop the team and its know-how;
- Support Brno organization and related activities.

Requirements:

- University degree in electrical, mechanical or software engineering;
- Excellent command of English language;
- Working experience and good knowledge of system/software development processes;
- Able to use the following tools and techniques: Functional Hazard Analysis, Failure Modes and Effects Analysis, Fault Tree Analysis and Probabilistic Risk Assessment;
- Experience or interest in leadership:
 - Ability to handle team of developers with different personalities and even from different cultures.
 - Ability to set clear objectives and establish means and tools and metrics to monitor results and control the work/team.
 - Ability to deliver timely and objective feedback on accomplishments/status/issues to the team/project leaders/management.
